## REINVENTING TRADITION

For thousands of years, the land of the rising sun has been inspiring a variety of trends with its rich culture and down to earth simplicity – be it through colors, shapes or traditional handicraft techniques such as macramé.

The art of knotting, which originated in the Orient, is considered to be the precursor of modern day knitting and weaving techniques and uses a wide range of different knots to create elaborately designed decorations, ornaments, jewelry and furnishings.

Adapting this original manufacturing process to the spirit of modernity has been the provocative aim of our creative department, because as the Arabic origin of the word „migramah“ already implies, figuratively it is a matter of weaving – **so the ambition for us was to industrially produce such graceful splendor, resulting in a subtle reinterpretation of the macramé technique with the Eco fabrics from the SENSUS line.**

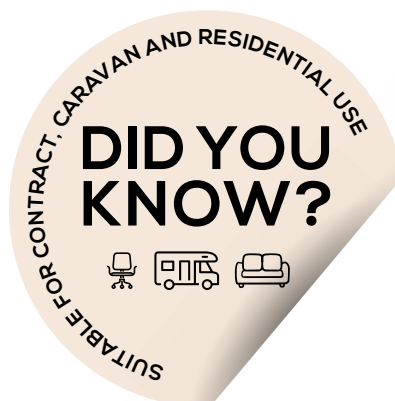

## CONTROVERSIAL – LOOP BY LOOP

**The Eco constructions are different, combining for the first time the polarizing beauty of a sustainable bouclé yarn with the properties of a high-performance textile.**

The coarseness of the used material emphasizes the handcrafted character of the fabric construction and creates decorative lifestyle highlights.

Our bouclé combines different sustainability aspects into a timelessly beautiful yarn, without compromising on durability or longevity. The core thread is made from recycled plastic bottles, while the pile consists of polyester, which is regenerated from woven textiles.

**Fabrics from our Eco Line impress with extraordinary technical properties and are easy to clean. The collection is reliable companion for all areas of application where inner values and outer comfort are of the utmost importance.**

The use of recycled materials may cause an increased color deviation and affects the hand from lot to lot. Please therefore only process the fabrics according to lots.

## ROUND AND ROUND IN CIRCLES

yarn production  
**100%**  
**SUSTAINABLE**

For us, consistent and implemented up-cycling includes transparency throughout the entire production process, as well as the yarns being certified according to GRS and Ökotex Standard 100. Of course, the Reach regulations are also complied to.

All of our Eco fabrics are made from 100% polyester and are therefore free from impurities. After their life as precious SENSUS textile, they can easily be restored into another recycling process.

Our constructions are in compliance with Ökotex Standard 100 and engineered according to firm principles: outstanding performance, sensorially pleasing and ecologically valuable – that's what SENSUS stands for.

**The Eco line contains of at least 50% recycled components.**

## ORIENT MEETS OCCIDENT

With Eco Dimension we take three-dimensionality to the next level. Organic jacquard patterns are both detailed and mysterious at the same time. The unique articles allow for a perfectly color coordinated living environment in the boho-style, but can also be easily integrated into existing settings thanks to their balanced, natural color palette.

Vibrant one-of-a-kind solid constructions complete the high-performance product range. With their countless color nuances, they effortlessly form the basis for cozy retreats in harmony with nature.

**As with all of our developments, the essential merits and the good feeling of carefully shaping the future with consistent sustainability are most convincing attributes for our SENSUS textiles.**

*Progress lies  
not in enhancing  
what is, but  
in advancing  
toward what  
will be.*
